(57) Abstract: A method in a industrial safety system for controlling a process or equipment, which industrial safety system comprises components with safety devices, which control system enables signals to be generated as a result of an event or alarm. An automated link is created between the event or alarm and an action to be taken upon receipt of said event or alarm signal due to the event. A control signal is generated to initiate the action. Also a computerised system according to the method is described.
